## Polarizer - a platform for safe discussion of polarized topics - announces plan to offer NOH8 tokens

Polarizer.io is a free and open software project dedicated to restoring the trusted role of the internet in civil discourse.

The platform's core feature is a radar map that gives a visual representation of opinion polarization regarding a specific topic. Dialogue ratings given by both participants of consensual one on one chats, determine the positioning of their opinions on the map.

In order to provide long term financial viability, participation and governance for Polarizer.io we hereby propose to mint crypto tokens named NOH8 (NOHATE) on the Ethereum blockchain.

Users, Contributors, Team members, Investors and Clients will earn, buy, spend and/or sell NOH8 tokens as shown in Fig.1.

One of the most anticipated means of earning NOH8 tokens is by having diverse, positively rated chats with opposing viewpoints on Polarizer.io.

The economy will be governed by a representative three party system (Fig. 2. ) that elects committees which in turn are accountable to the public.

The first NOH8 token will be mined April 2, 2021.
